Hi Ranga,

Writing with reference to below mentioned invoices for Chicago Police Department.

Transaction	Original Amount	Remaining Amount	Days Late	Due Date	Purchase Order	Sales Order
6294258	359,100.95	359,100.95	4	17-Oct-09	PO# T24572	300209650
6293988	97,624.75	97,624.75	11	10-Oct-09	PO# T24572.	300249055
6291779	95,802.28	1,721.86	46	5-Sep-09	PO# T24572.	300249055
6289725	93,821.40	1,455.24	83	30-Jul-09	PO# T24572.	300249055

Do we have any kind of update for these from the customer.

Thanks,
Meera.

Per below-- I am getting calls several times a week concerning Bt 1111's POD expansion project.

The approx cost for the twelve (12) new PODs, if we decide to fund this, will be in the \$250k range. 1505 funding might be a possibility, since Selling Narcotics is by far the top call for service on Beat 1111. UASI funds are not suitable for this due to the locations.

Please advise.

Thanks

Subject: POD Index Scores

Deputy Brown,

Attached is a citywide list of PODs along with their Index Scores (past 90 days), to assist in determining if you'd like to request any moves. Note that not every camera can be moved, depending on the POD owner and site conditions (i.e. suitability for wireless signal, type of camera, type of street pole in the target location, etc).

If appropriate, we or you can send something out to the commanders asking them to review this list and current district conditions and submit any move requests for the POD Committee to consider.

Thanks,
Jonathan

Subject: FW: POD Index Scores

Per below-- I am getting calls several times a week concerning Bt 1111's POD expansion project.

The approx cost for the twelve (12) new PODs, if we decide to fund this, will be in the \$250k range. 1505 funding might be a possibility, since Selling Narcotics is by far the top call for service on Beat 1111. UASI funds are not suitable for this due to the locations.

Please advise.

Thanks
Jonathan

Subject: POD Index Scores

Deputy Brown,

Attached is a citywide list of PODs along with their Index Scores (past 90 days), to assist in determining if you'd like to request any moves. Note that not every camera can be moved, depending on the POD owner and site conditions (i.e. suitability for wireless signal, type of camera, type of street pole in the target location, etc).

If appropriate, we or you can send something out to the commanders asking them to review this list and current district conditions and submit any move requests for the POD Committee to consider.

Thanks,
Jonathan

Subject: FW: Shotspotter

Chief,

Please see below and attached. The Department of Police conducted a test of two (2) gunshot detection systems during the summer of 2007. The systems were from PSI and ShotSpotter. Each system included a test area of approximately one (1) square mile. The PSI system was also tested in an area of the 011 district. Computers with sensor detection equipment for each of the systems were located in the CPIC, where they could be monitored 24 hrs per day. Staff were trained in the CPIC on the use of these systems.

At the conclusion of the test, we determined that the ShotSpotter system was superior to the other two based on ease of use, accuracy, and user interface.

As we briefly discussed, the Department of Police has been utilizing a gunshot detection system from ShotSpotter since Jan 07. This system is now installed in the 011 district. The boundaries include most of beats 1112 and 1121. There are sixteen (16) ShotSpotter microphone locations, most of them on city light poles. Some are on schools and other public buildings. This test equipment has been provided at no cost by the vendor. Per our conversation, the cost of each one square-mile installation is approximately \$200,000.00 if we decide to purchase.

During my conversations with Chief Limon, he had indicated the possibility of using 1505 funds for this initiative. We discussed purchasing one system (to support a one square-mile area). The current system could be purchased and re-located to another area as appropriate. In its current location, the system has had at least one success: on 3 May 2007, ShotSpotter alerted CPIC staff of a possible gunshot event on the 3700 block of West Chicago Ave. There were no calls to 911 concerning this event. CPIC staff notified OEMC to dispatch a beat car. Upon arrival, the beat car was able to locate a gunshot victim at 3725 W. Chicago Ave. and obtain medical assistance. The system could also be moved to another location. Its current boundary represents the 4th-highest one-mile hotspot for Shots Fired calls-for-service. At the time of the test, the highest-rated hotspot was actually in the 015 district, Central/ Cicero to Hirsch/ Ohio. We could conduct an updated analysis and recommend another location for placement.

The position we're in now is that we have been using a system at no cost for almost two years. There is no other available source of funding to support the purchase of this system. If we are unable to purchase the system, the vendor will remove it. If this happens, the City of Chicago will have no gunshot detection system of any kind in place. I am submitting this request for your consideration. If approved, an existing contract for Operation Virtual Shield (OVS) will allow for this purchase.

Please see attached map.

Thanks,
Jonathan

Subject: FW: Shotspotter

Frank,

The attached map utilizes Shots Fired and Selling Narcotics calls for service from 1 Jan - 8 Apr 2008 and identifies the top seven (7) one-mile regions city wide, in rank order, with the highest concentrations of calls (equally weighted). The number of PODs in each of the identified regions is also shown.

Note that our current ShotSpotter test system is shown (in the 4th-ranked region), along with our second test system from PSI that never worked correctly (in the 7th-ranked region). The top five regions all have at least thirteen PODs, and four of them have fifteen or more PODs, which make them all well-suited to integration of PODs and gunshot detection within the region.

We are still waiting for the final cost of each ShotSpotter installation, which will be handled through the IBM OVS contract as approved by OEMC and PBC, but a rough estimate is \$200,000 per one-mile region. This will provide for the installation and first-year maintenance of between sixteen and twenty audio sensors per region (with annual maintenance costs to be determined). Costs of integration with the PODs will also have to be factored in.

Let me know what other details are required for this initial proposal, and Deputy O'Keefe would like to review before submission.

Thanks!
Jonathan

Subject: FW: Shotspotter

Chief,

Please see below and attached. The Department of Police conducted a test of two (2) gunshot detection systems during the summer of 2007. The systems were from PSI and ShotSpotter. Each system included a test area of approximately one (1) square mile. The PSI system was also tested in an area of the 011 district. Computers with sensor detection equipment for each of the systems were located in the CPIC, where they could be monitored 24 hrs per day. Staff were trained in the CPIC on the use of these systems.

At the conclusion of the test, we determined that the ShotSpotter system was superior to the other two based on ease of use, accuracy, and user interface.

As we briefly discussed, the Department of Police has been utilizing a gunshot detection system from ShotSpotter since Jan 07. This system is now installed in the 011 district. The boundaries include most of beats 1112 and 1121. There are sixteen (16) ShotSpotter microphone locations, most of them on city light poles. Some are on schools and other public buildings. This test equipment has been provided at no cost by the vendor. Per our conversation, the cost of each one square-mile installation is approximately \$200,000.00 if we decide to purchase.

During my conversations with Chief Limon, he had indicated the possibility of using 1505 funds for this initiative. We discussed purchasing one system (to support a one square-mile area). The current system could be purchased and re-located to another area as appropriate. In its current location, the system has had at least one success: on 3 May 2007, ShotSpotter alerted CPIC staff of a possible gunshot event on the 3700 block of West Chicago Ave. There were no calls to 911 concerning this event. CPIC staff notified OEMC to dispatch a beat car. Upon arrival, the beat car was able to locate a gunshot victim at 3725 W. Chicago Ave. and obtain medical assistance. The system could also be moved to another location. Its current boundary represents the 4th-highest one-mile hotspot for Shots Fired calls-for-service. At the time of the test, the highest-rated hotspot was actually in the 015 district, Central/ Cicero to Hirsch/ Ohio. We could conduct an updated analysis and recommend another location for placement.

The position we're in now is that we have been using a system at no cost for almost two years. There is no other available source of funding to support the purchase of this system. If we are unable to purchase the system, the vendor will remove it. If this happens, the City of Chicago will have no gunshot detection system of any kind in place. I am submitting this request for your consideration. If approved, an existing contract for Operation Virtual Shield (OVS) will allow for this purchase.

Please see attached map.

Thanks,
Jonathan

Frank,

The attached map utilizes Shots Fired and Selling Narcotics calls for service from 1 Jan - 8 Apr 2008 and identifies the top seven (7) one-mile regions city wide, in rank order, with the highest concentrations of calls (equally weighted). The number of PODs in each of the identified regions is also shown.

Note that our current ShotSpotter test system is shown (in the 4th-ranked region), along with our second test system from PSI that never worked correctly (in the 7th-ranked region). The top five regions all have at least thirteen PODs, and four of them have fifteen or more PODs, which make them all well-suited to integration of PODs and gunshot detection within the region.

We are still waiting for the final cost of each ShotSpotter installation, which will be handled through the IBM OVS contract as approved by OEMC and PBC, but a rough estimate is \$200,000 per one-mile region. This will provide for the installation and first-year maintenance of between sixteen and twenty audio sensors per region (with annual maintenance costs to be determined). Costs of integration with the PODs will also have to be factored in.

Let me know what other details are required for this initial proposal, and Deputy O'Keefe would like to review before submission.

Thanks!

Jonathan

Yes sir...according to the application there are 35 CPD and 50 Corporate on the ground right now...Chief Limon issued a funding strip prior to his retirement for the purchase of additional 1505 cameras...they were pickup approximately 3-4 weeks ago...all of these new cameras are wireless micro-pods...our saturation issues may be a problem for some of the closed NAGIS locations.
